BATTERY 2030+ Memorandum on Research Standards and Guidelines

**114 Signatures from
57 Affiliations**

**Read and Sign the
Memorandum today:**

Combined, RDM tools and standardisation will not only improve the general quality of research within BATTERY 2030+ and enable the FAIR* data principles. More importantly, the collaboration will be possible on entirely new levels, allowing for a novel, autonomous research approaches, accelerated materials discovery, and data-based research in a field that has thus far mostly adhered to classical trial and error research.

Protocols & Standards

- Key Performance Indicators (KPIs) & Process Parameters (PPs) along the R&D process chain for batteries – FOCUS ON CELL FABRICATION

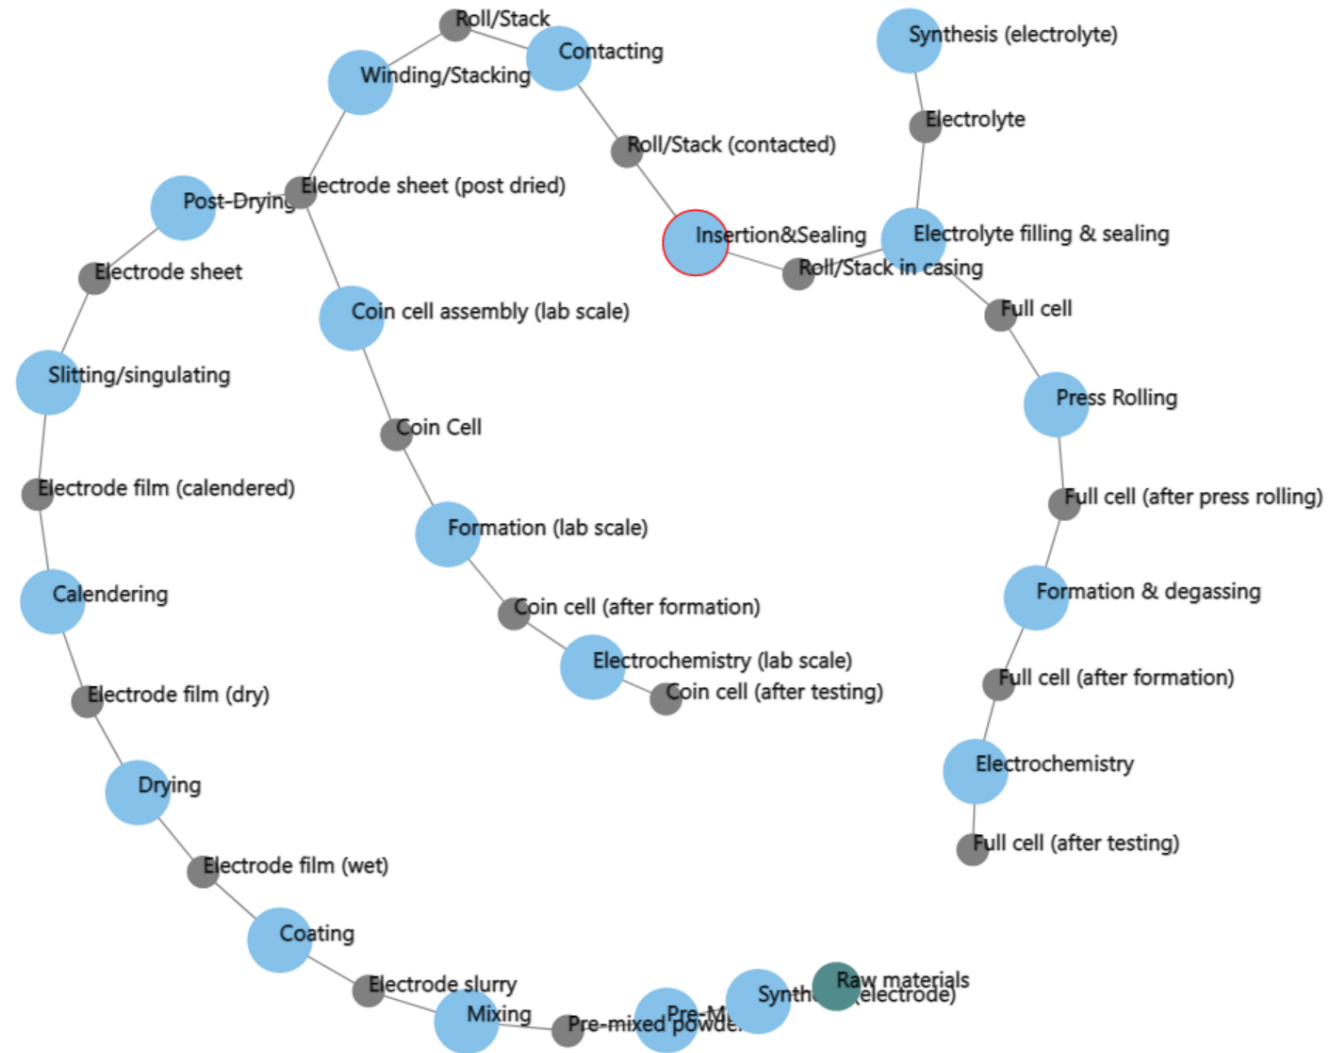

From: F.M. Zanotto et al. "Data Specifications for Battery Manufacturing Digitalization", Batteries & Supercaps (2022) e202200224

Protocols & Standards

- Key Performance Indicators (KPIs) & Process Parameters (PPs) along the R&D process chain for batteries – FOCUS ON CELL FABRICATION

- PPs and KPIs for each step and intermediary “product” identified

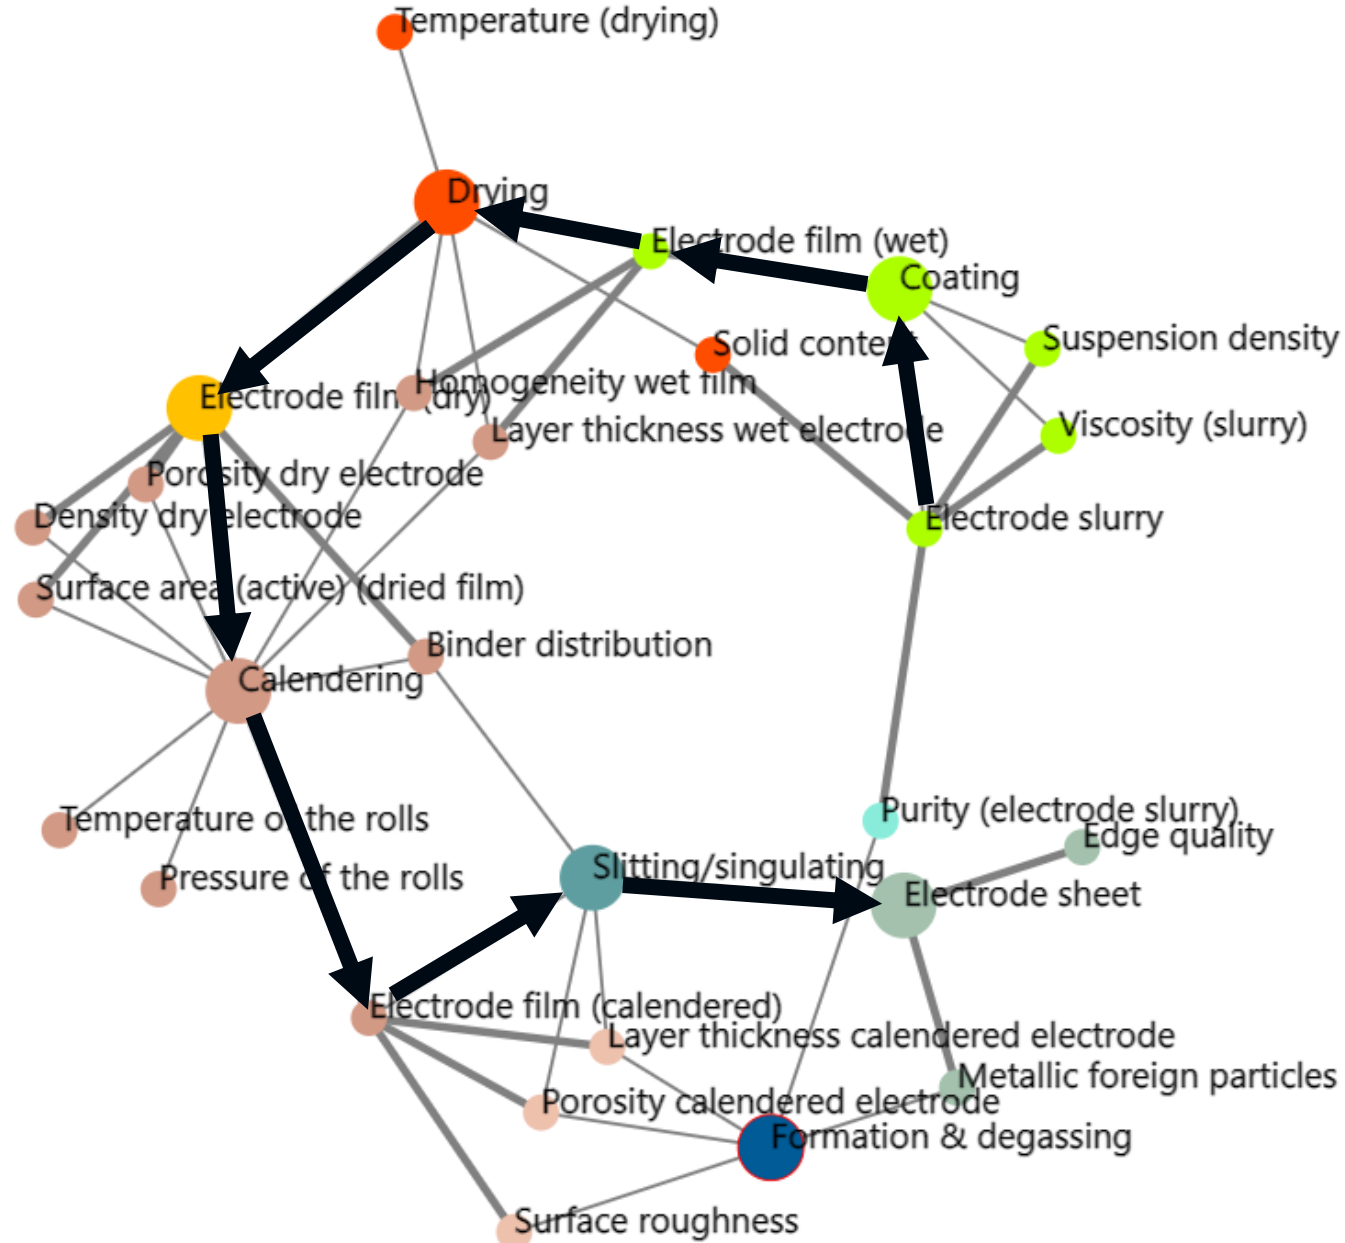

Network is being created, as KPIs of one step become PPs for subsequent steps

- First measurement methods and protocols for PPs & KPIs identified

Protocols & Standards

OVERALL NETWORK:

- 150+ KPIs and PPs
- Each associated with method of measurement
- Data & Metadata
- Protocols and procedures
- Blank Detail Specifications

HUGE TASK!

- Focus on pilot activities and best practice examples

Protocols & Standards

Extract from full data base:

Calendering process, KPIs of calendered electrode

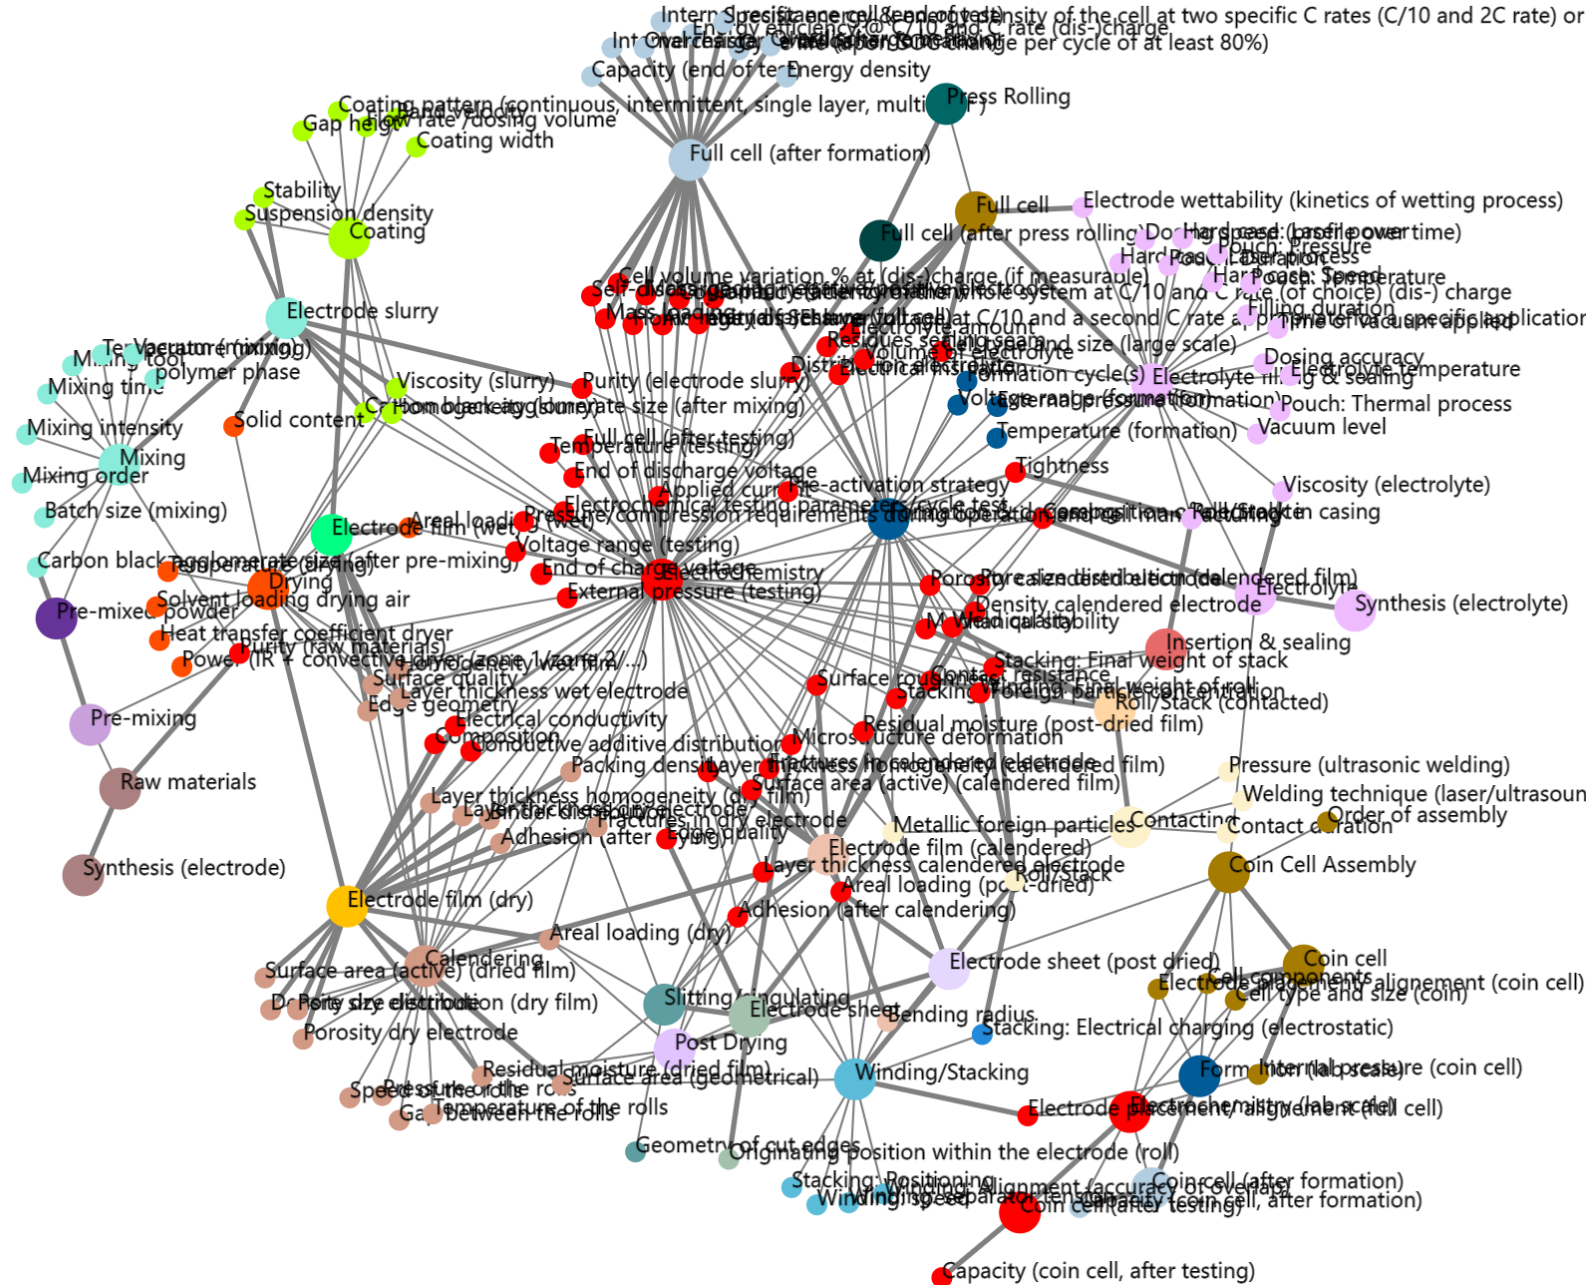

Selection of 3 KPIs w/ connection to several subsequent steps

KPI	PP 1 for	PP 2 for	PP 3 for	Measurement technique
Layer thickness calendered electrode	Slitting/singulating	Post Drying	Electrochemistry	Thickness gauge, SEM, Laser triangulation
Porosity calendered electrode	Electrolyte filling & sealing	Formation & degassing	Electrochemistry	Laser triangulation, mercury porosimetry
Surface roughness	Formation & degassing	Electrochemistry		SEM, Reflectometer

Let's take a look at the complete network of process steps, KPIs and PPs...

Motivation

Linking Research Data to Ontology (Terms)?

➔ **Open Semantic Lab**

➔ **Object Oriented Linked Data**

- Object orientation
- Linked Data

Theoretical Background

Object Orientation (OO)

Object Orientation – a (subconsciously) often used concept

Everything

- Is an Object

Extension: Everything

- Has a Type
- Has an unique identifier

Abstract concepts

Real-world (physical) Items

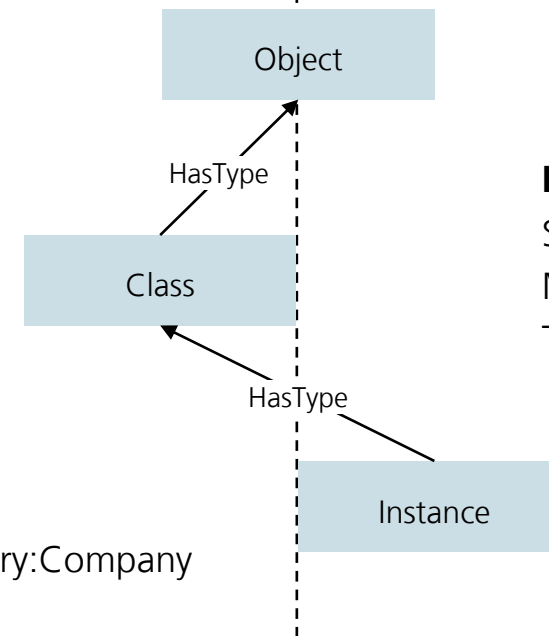

Defines

- Set of properties
- Valid range thereof

Category:Car

Serial No.:
Manufacturer:
Type No.:

string
Category:Company
string

Item:MyElectricCar

Serial No.: Y02-4256
Manufacturer: Green Motion
Type No.: Y02

Theoretical Background

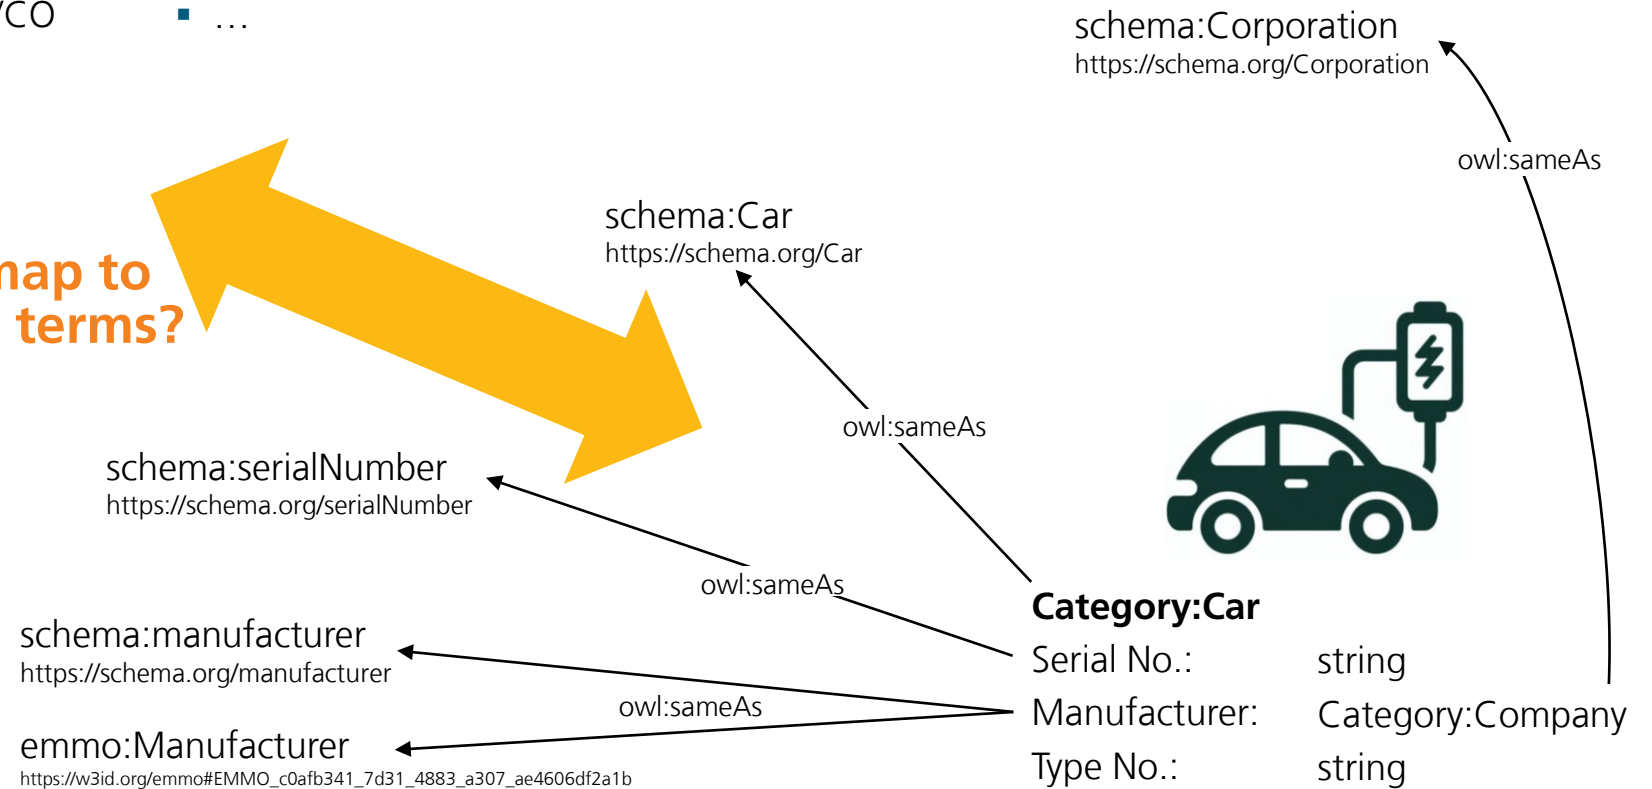

Object Oriented Linked Data (OO-LD)

Abstract concepts

- EMMO
- BattINFO
- BVCO
- Schema.org
- FOAF
- ...

How to map to ontology terms?

Application Example

OO-LD in Action

Abstract concepts

Category:Vehicle (JSON Schema)

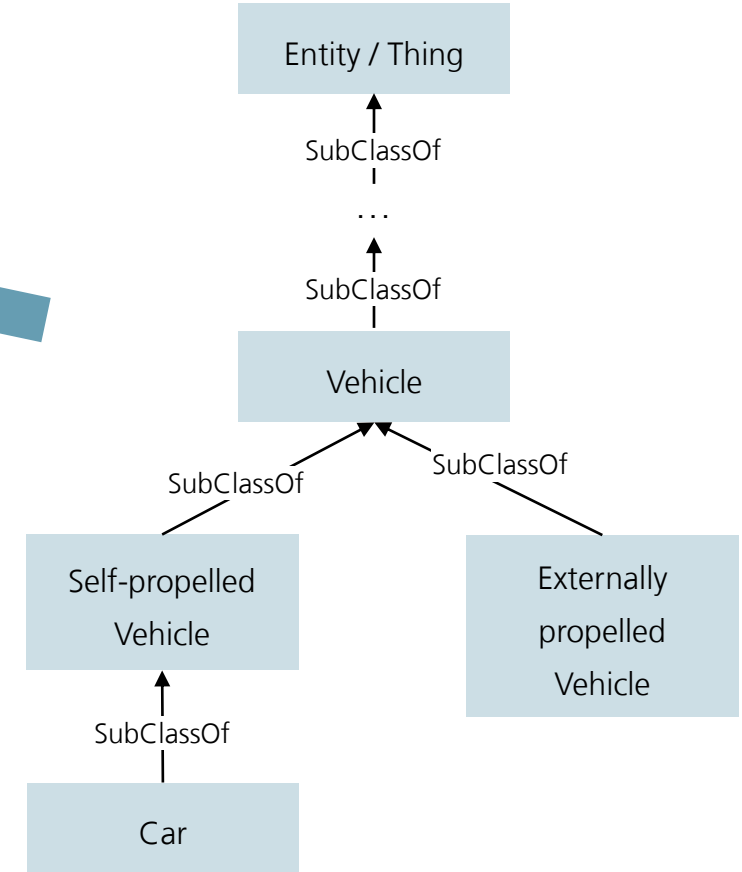

```
1- {
2-   "@context": [
3-     {
4-       "manufacturer": "schema:manufacturer",
5-       "manufacturer*": "emmo:EMMO_c0afb341_7d31_4883_a307_ae4606df2a1b",
6-       "serial_or_batch_number": "schema:serialNumber",
7-       "serial_or_batch_number*": {
8-         "@id": "Property:HasSerialNumber",
9-         "@type": "xsd:string"
10-      },
11-       "serial_or_batch_number**": {
12-         "@id": "Property:HasBatchNumber",
13-         "@type": "xsd:string"
14-      },
15-       "manufacturer**": {
16-         "@id": "Property:HasManufacturer",
17-         "@type": "@id"
18-      }
19-     }
20-   ]
21- }
```

Category:Car (JSON Data)

```
1- {
2-   "name": "Car",
3-   "subclass_of": [
4-     "Category:OSWaf7b11dea04e4ad189e32124956af9b6"
5-   ],
6-   "rdf_type": [
7-     "schema:Car"
8-   ],
9-   "label": [
10-    {
11-      "text": "Car",
12-      "lang": "en"
13-    }
14-  ]
15- }
```

Categories:

Application Example

OO-LD in Action

Item: MyElectricCar (JSON Data)

```
1 {  
2   "type": [  
3     "Category:0Swea8e435f766b484e9fbb53344c90a942"  
4   ],  
5   "manufacturer": "Item:0Svbd9d3e4203c94d488d10c1cdda84d985",  
6   "manufacturer_type_no": "Y02",  
7   "serial_or_batch_number": "Y02-4256",  
8   "uuid": "5538bdc6-bd0d-413a-9337-73136dade46b",  
9   "label": [  
10    {  
11      "text": "My Electric Car",  
12      "lang": "en"  
13    }  
14  ],  
15  "description": [  
16    {  
17      "text": "This is a made up car for demonstration purpose",  
18      "lang": "en"  
19    }  
20  ],  
21  "name": "MyElectricCar",  
22  "image": "File:0SM736e9fde3224d7e8c185f352cf53b0f.png"  
23 }

Battery2030+ Knowledge Base

Hands-on Tutorial

The screenshot shows the Battery Knowledge Base website. The main header features a purple banner with the text "Battery Knowledge Base" and a network diagram with nodes labeled "Data", "CR2032", "Mixing", "Organizations", "EIS", and "People". Below the banner is a "Welcome to the Battery Knowledge Base" section with a description: "An open and free collection of battery knowledge, currently with 4497 entries that anyone can edit!". It includes sections for "Explore Our Resources" (mentioning Semantic Web standards and SPARQL queries), "SPARQL Query Interface", "SPARQL Endpoint", and "Utility & Master Data". A sidebar on the right contains a "Contents" menu with links: "Welcome to the Battery Knowledge Base", "Explore Our Resources", "SPARQL Query Interface", "SPARQL Endpoint", "Utility & Master Data", "Knowledge Graph", "Flow Chart", "Entity List", and "Funding".
